ABSTRACTED-PUB-NO: JP 09172409A BASIC-ABSTRACT:

The apparatus has a light emitter (4) which transmits infrared signal to other infrared communication apparatus. The other infrared communication apparatus is provided opposite the infrared communication apparatus in a short distance.

A controller (1) regulates the intensity of the transmitted infrared signal to optimum according to the opposite distance of the infrared communication apparatuses.

ADVANTAGE - Prevents incorrect communication and malfunctioning.
